5,652 Consecutive Days Running a Mile or More

EDUCATION

University of Michigan, Ann Arbor
B.S.E. in Computer Science & Engineering

GPA: 3.6/4.0
April 2017

EXPERIENCE

Nike Technology - GenAI Blueprints

Sr Software Engineer

Beaverton, OR

June 2025 - Present

- Designed and implemented a blueprint for MCP servers that enabled teams to quickly build and deploy their existing tools to interface with AI agents
- Built a multi-agent deep research POC using LangGraph that autonomously researched complex topics and generated comprehensive reports using internal and vetted external data sources

Nike Technology - GenAI Copywriting

Sr Software Engineer

May 2024 - June 2025

- Designed, implemented, and deployed a Generative AI powered, full-stack application to assist marketers in generating product copy for 8,000 products per season using NPE, Vue.js, and FastAPI
- Generated \$24M in annualized demand lift by delivering copy on time, leading to longer full price runway and increasing wholesale conversion rate where no copy existed before
- Extensively evaluated the GenAI solution including focused golden dataset tests that checked exact accuracy, and large-scale statistical tests to ensure high quality and enable rapid development
- Instilled a welcoming engineering culture with high standards by mentoring teammates, presiding over design discussions, and balancing growth and delivery

Nike Technology - Member Insights

Sr Software Engineer

November 2021 - May 2024

- Designed, implemented, and deployed three large-scale data and model pipelines and one API for model serving that calculated core member KPIs Lifetime Value, Churn, and Segmentation using data technologies such as Spark, Databricks, Airflow, and S3 in Python
- Reduced cost and runtime of legacy data and model pipelines by up to 98% by optimizing data access patterns and right-sizing infrastructure
- Served as engineering representative on a data science team, mentoring teammates by introducing software engineering best practices and earning adoption by demonstrating their value

Nike Technology - Launch Demand Forecasting

Data Engineer

February 2019 - November 2021

- Built and maintained the data, application, and model hosting for sneaker launch demand forecasting that unlocked over \$4M in EBIT per geo/season using full-stack technologies for ETL (Airflow, EMR, Spark), backend (Python, Flask, Lambda/API Gateway), and frontend (AngularJS, HTML5)

Nike Technology - Rotation

Software Engineer

July 2017 - February 2019

- Rotation 1: Implemented an SAP inventory planning tool to improve always available product levels and save over \$4M in inventory positions
- Rotation 2: Enabled data scientist productivity by implementing proactive platform health checks and a framework for containerizing models with Docker
- Rotation 3: Built APIs for incident management to allow automation, saving 120 hrs/wk in manual work

TECHNICAL STRENGTHS

Programming Languages	Python, JavaScript, TypeScript, C++, C, Java, Go
Web Technologies	Vue, React, REST, Node.js, Express, FastAPI
Data	Databricks, Snowflake, Spark, Airflow, DynamoDB, Vector Databases
AI	LangChain, LangGraph, Agents, RAG, MCP
Cloud	Lambda, S3, EC2, ECS, API Gateway, NPE, Sagemaker
Tools	Linux, Git, Vim, Jenkins, Docker, Terraform, Cursor
